PERSONAL PROFILE

Computer Science graduate (First Class Honours, University of Chester) with a production portfolio that stands apart from typical graduates. Built and deployed multiple real systems used by real users, including a security analysis platform that performs 13+ OWASP Top 10 automated checks, a cloud-native file-sharing service that achieves 99.9% uptime, and a Spotify data pipeline that was organically adopted by 1,000+ users. Genuine AI/ML capability built from mathematical first principles. Full-stack experience across Python, TypeScript, React, Node.js, C#, and SQL with consistent focus on clean, testable, maintainable code and end-to-end ownership from design through to production.

EDUCATION

BSc Computer Science

University of Chester, UK

First Class Honours | 2022–2026

TECHNICAL SKILLS

Languages: Python, C#, JavaScript, TypeScript, SQL, R, Bash, HTML/CSS

Frontend: React, TypeScript, Tailwind CSS, React Router, Context API, responsive UI, component architecture

Backend & APIs: ASP.NET Core, Flask, Node.js, REST API design, JWT authentication, authenticated access control, serverless functions, Entity Framework ORM

Databases: SQL Server (T-SQL, complex queries, stored procedures, joins), SQLite, PostgreSQL, Firebase, NoSQL, relational data modelling, Supabase

AI & ML: Gaussian Naïve Bayes (from scratch), Prophet (time-series forecasting), NLP/text classification, feature engineering, Streamlit, Plotly, Claude API (daily use), Cursor, LLM-assisted development workflows

Security: OWASP Top 10, SSL/TLS analysis, HTTP security headers, XSS detection, injection pattern analysis, CSP assessment, JWT authentication, secure coding practices

Cloud & DevOps: Git, GitHub Actions, CI/CD pipelines, Vercel, Render, Cloudflare R2, AWS-compatible deployments, gunicorn, Docker (exposure), Kubernetes (awareness)

Data & Analytics: Pandas, NumPy, ETL pipeline design, data cleaning, statistical analysis, R (Tidyverse, ggplot2, Shiny), Google Looker Studio, Excel, Power BI (production - custom DAX measures, Power Query data transformation, many-to-many data modelling, care sector dashboards), Power Query (production - data cleaning, suppression handling, regional taxonomy normalisation)

Engineering Practices: SOLID principles, TDD, unit testing, integration testing, code reviews, Agile/Scrum, technical documentation, continuous monitoring, configurable alerting

EXPERIENCE

Web Developer & IT Support - Unique and Partners Consults LLC, USA | May 2025 – February 2026

- Delivered a production commercial web solution independently, designing architecture, developing and testing frontend and backend components, deploying to cloud infrastructure, and increasing client leads by 30% within two months
- Configured and maintained cloud infrastructure including DNS, HTTPS/TLS, email server, and cPanel administration, reducing support tickets by 60% through proactive monitoring, root cause analysis, and systematic documentation
- Acted as primary operational contact, managing user queries, triaging service issues, coordinating with external technical suppliers, and maintaining audit-ready incident records
- Used AI-assisted development workflows including Claude and Cursor throughout, accelerating delivery while maintaining code quality

Expert Network Consultant - GLG (Gerson Lehrman Group), UK | December 2024 – May 2025

- Completed 10+ structured consultations with senior institutional investors, researching complex questions, synthesising findings, and producing clear written recommendations that informed high-stakes financial decisions
- Consistently rated highly for analytical precision, structured communication, and ability to translate complex technical findings for non-technical senior audiences
- Managed multiple concurrent engagements under time pressure, demonstrating strong prioritisation and stakeholder relationship management

Student Ambassador - University of Chester | October 2022 – July 2024

- Engaged 100+ prospective students on Unibuddy, contributing to a 15% increase in international application conversions
- Produced digital content for campaigns reaching 1,000+ students; collaborated across admissions, marketing, and student services teams

IT Support Specialist - Mextron Ltd, Nigeria | September 2020 – September 2022

- Maintained IT systems across 3 departments, reducing downtime by 25% through systematic fault diagnosis, proactive monitoring, and preventive maintenance
- Coordinated with external technical suppliers, tracked resolution of infrastructure issues, and produced operational runbooks enabling consistent knowledge transfer
- Applied security-conscious practices, managing user access controls, applying system updates and patches, maintaining accurate incident records

PROJECTS

WebSecura – Full-Stack Security Analysis Platform (React, Python, Flask, SQLite)

- Built a production cybersecurity platform performing 13+ automated OWASP Top 10 checks, SSL/TLS validation, HTTP security headers, CSP assessment, XSS detection, cookie security, vulnerable JS library detection, and injection pattern analysis across URL parameters and form inputs
- Engineered a custom Python scanning engine with dual-context SSL verification, robust header normalisation, and passive injection pattern analysis, demonstrating first-principles understanding of how web vulnerabilities manifest and how to detect them systematically
- Implemented Clerk JWT authentication, scan history persistence in SQLite, PDF/CSV export, and a continuous monitoring system with configurable schedules (hourly/daily/weekly/monthly), threshold-based alerting, and background scheduler
- Migrated frontend from vanilla HTML/CSS/JS to a full React SPA with React Router, Context API, and Tailwind CSS, deployed to Vercel (frontend) and Render (backend) with gunicorn and environment-specific CORS configuration

Clouddey – Secure Cloud File Sharing Platform (React, TypeScript, Node.js, Vercel, Cloudflare R2)

- Built a production cloud-native platform with React and TypeScript frontend, implementing conditional rendering, countdown timers, password protection flows, and multi-language support across 7 languages
- Designed Node.js serverless backend with REST API services, Cloudflare R2 object storage, automated lifecycle management, and authenticated access control
- Achieved 99.9% uptime through comprehensive error handling, retry logic, and fault-tolerant architecture deployed with CI/CD-aware workflows

Naïve Bayes Predictor – AI from First Principles (Python, Streamlit, Plotly, Pandas, NumPy)

- Implemented a Gaussian Naïve Bayes classifier entirely from mathematical first principles, tokenisation, feature extraction, probabilistic computation, Laplace smoothing, log-space transformation for numerical stability, and class imbalance handling, without any ML libraries, on a 2,000-record dataset achieving 56% accuracy
- Built an interactive Streamlit dashboard with real-time predictions, confidence gauges, probability distributions, and a confusion matrix, making complex statistical outputs accessible to non-technical users
- Solving numerical underflow through log-space transformation and zero-frequency through Laplace smoothing demonstrates the kind of deep algorithmic understanding that separates engineers who build AI from those who call it

Spotify Wrapped Prediction (Python, Pandas, Prophet, React, Spotify API)

- Built an end-to-end data pipeline integrating Spotify's OAuth-based API, applying feature engineering and Prophet time-series forecasting to model individual listening behaviour and predict Wrapped outcomes
- Deployed a production React interface serving structured predictions to 1,000+ users organically, a self-initiated project built from genuine curiosity, demonstrating product instinct and the ability to build tools real users adopt
- Maintained clean, reproducible Python code with systematic validation at each pipeline stage throughout

Lofis Restaurant Platform (ASP.NET Core, C#, SQL Server)

- Architected a production full-stack system in C# and ASP.NET Core with a normalised SQL Server relational database, Entity Framework ORM, and role-based access control across customer and admin interfaces
- Applied SOLID principles throughout, single responsibility across service classes, dependency injection for testability, interface abstractions separating data access from business logic
- Practised TDD, writing unit and integration tests across authentication, order management, and database components before implementation, maintaining coverage that caught regressions before production
- Managed complete SDLC from requirements through to deployment with full version control, CI/CD-aware workflows, and technical documentation throughout

STEP UP National Highways Data Challenge (Python, R, Data Analysis | December 2024)

- Merged six datasets: journey patterns, emissions, costs, eco-consciousness, fare data, and congestion factors, applying systematic data cleaning, quality validation, and complex data manipulation
- Identified key trends across transport modes, peak vs non-peak travel, and geographic origin, producing data visualisations and evidence-based policy recommendations certified by National Highways

Care Workforce & Quality Dashboard (Power BI, Power Query, DAX)

- Built an end-to-end Power BI dashboard combining two UK government datasets, Skills for Care regional workforce statistics and CQC care location ratings, modelling a many-to-many relationship across mismatched regional taxonomies and 30,000+ rated locations
- Diagnosed silent data quality issues invisible to standard tooling: suppression symbols converting numeric columns to text and breaking aggregation, and inconsistent regional naming conventions failing joins without producing errors
- Engineered custom DAX measures to correctly average rate-based metrics (vacancy rate, turnover rate) across a many-to-many model, and filtered a six-row-per-location ratings table to a single representative rating per location to prevent inflated counts

E-Commerce Analytics Pipeline (Python, Pandas, SQL, Excel, Google Looker Studio)

- Built an ETL pipeline merging four relational datasets customers, orders, products, transactions, applying data cleaning, referential integrity checks, and complex SQL queries before analysis
- Produced KPI dashboards, customer segmentation analysis, and revenue trend visualisations in Looker Studio and Excel; applied Prophet time-series forecasting for demand prediction

UK Tech Jobs Dashboard (R, Tidyverse, Plotly, Shiny, SQL)

- Performed EDA on 10,000+ job posting records, cleaning, transforming, and analysing data in R and SQL before producing interactive dashboards tracking salary trends, skills demand, and geographic distribution
- Designed visualisations in Plotly and Shiny specifically for non-technical audiences, translating complex multi-dimensional findings into clear, accessible management information

LEADERSHIP & EXTRACURRICULARS

University of Chester Venture Pitch 2026 - Won coaching award with ShiftCove, a care staffing marketplace, demonstrating ability to understand complex operational problems and present technology solutions clearly to senior evaluators

Afro-Caribbean Society (Events Committee) - Coordinated event logistics, gathered user feedback, and drove continuous improvement, increasing engagement by 25%

CERTIFICATIONS

STEP UP National Highways Virtual Work Experience Certificate - Digdata / National Highways (December 2024)
